B. Tech. EXAMINATION, 2018

Semester V (CBS)

ARTIFICIAL INTELLIGENCE AND EXPERT SYSTEM (CSE, IT)

CS-504

Time : 3 Hours   *Maximum Marks : 60*

The candidates shall limit their answers precisely within the answer-book (40 pages) issued to them and no supplementary/continuation sheet will be issued.

Note : Attempt *Five* questions in all, selecting *one* question from each Sections A, B, C and D and all the sup-parts of the question in Section E.

Section A

→ BFS , A*

1. (a) Explain any *two* informed search strategies in detail.   6

   (b) Describe the A* search and give the proof of optimality of A*.   6

P.T.O.

2. (a) What is an Agent ? Explain the basic kind of agent program.   6

  (b) What is depth limited search ? Give the recursive implementation of depth limited search.   6

Section B

3. (a) Write an algorithm for deciding entailment in proposition logic.   6

  (b) Explain standard quantifier of first order logic with example.   6

4. (a) Explain the forward chaining algorithm with the help of pseudo code.   6

  (b) Give the completeness proof of resolution.   6

Section C

5. (a) Explain back propagation learning algorithm with an example.   6

  (b) Describe any genetic algorithm working principle with real time implementation.   6

6. (a) What is the basic problem with genetic algorithm ? Explain with suitable example.   6

  (b) Explain the details about Hopfield network with an example.   6

Section D

7. (a) Explain the knowledge characteristics of Expert system with an example.   6

    (b) Explain, how forward chaining is different from backward chaining expert system with suitable example.   6

8. (a) Discuss the different design issues to be solved to use HMM for real world application.   6

    (b) Write the difference between skill and knowledge characteristics of expert system with example.   6

Section E

9. (a) What is the use of heuristic functions ?

    (b) How to improve the effectiveness of a search-based problem-solving technique ?

    (c) What is unification algorithm ?

    (d) How can you represent the resolution in predicate logic ?

    (e) Write the difference between JTMS and LTMS.

    (f) What are framesets and instances ? $6 \times 2 = 12$
